Tech Tips: Explore the History & Advantages of Best Source Selection for Modern Telemetry Applications

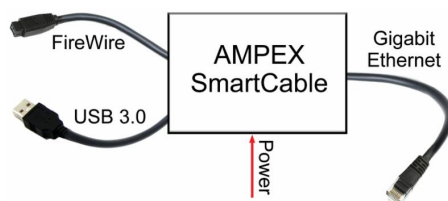

[Best Source Selection \(BSS\)](#) has become a major concern for modern telemetry ranges and ground stations around the world. Best Source Selection techniques for telemetry applications have been around for over 25 years.

The introduction of Next Generation Correlating Best Source Selection techniques has evolved the BSS function into a powerful tool for the real-time and post flight recovery of telemetry data. These Next Generation techniques, currently operational at a variety of ranges around the world, provide a significant performance increase. As ranges move toward network centric solutions, Correlating Best Source Selectors have followed this trend by addressing issues such as encrypted data, latency, and switching from stream-to-stream without dropping lock on downstream frame synchronizers.

GDP Space Systems' Technical Paper describes the evolution of Best Source Selection along with advantages and disadvantages of the approaches and operating modes available today. [Request a PDF the full Technical Paper here.](#)

NEW SmartCable Intelligent Download Interface

AMPEX's new SmartCable is an intelligent bridge between rugged memory modules and a download station.

The SmartCable provides a compact solution that distances the physical interface (USB, FireWire, etc) from the download station using ubiquitous gigabit Ethernet. [Read more here.](#)

Thank You for A Memorable Grand Opening Event!

In early March, [Delta Information Systems](#) and its local subsidiaries, [Delta Digital Video](#) and [GDP Space Systems](#), moved to a larger facility to accommodate growth. On Thursday, May 10th Delta Information Systems held a Grand Opening and Open House event to celebrate with local community representatives, friends, and employee family members.

DATT SUMMIT

ORLANDO, FL | JUNE 4 -7, 2018

Visit **booth #101** to see featured solutions from the Delta Family of Companies for video processing, range telemetry systems, and for the acquisition, exploitation, and protection of data for land, sea, air and space applications.

Pictured from left to right: Delta Digital Video VP George Nelson, PA State Representative Todd Stephens, Delta Information Systems President Gary Thom, Horsham Council Member Veronica Hill-Milbourne, Montgomery County Commissioner Joe Gale, and GDP Space Systems VP Steve Nicolo.

Ampex Partners with OPAL-RT Technologies to Ensure the Security of Critical Infrastructure

[AMPLEX](#) has partnered with [OPAL-RT Technologies](#), a Canadian company that develops of PC / FPGA-based real-time simulators, Hardware-in-the-Loop (HIL) testing equipment, and Rapid Control Prototyping (RCP) systems that are used to design, test, and optimize control and protection systems for power grids, power electronics, motor drives, automotive, rail, aviation and various other critical infrastructure industries.
