TITLE: FINAL TEXT OF RECOMMENDATION T.35 INCORPORATING
AMENDEMENT 1

Draft revised Recommendation T.35

PROCEDURE FOR THE ALLOCATION OF ITU-T DEFINED CODES

FOR NON- STANDARD FACILITIES

(revised 2000)

1 Introduction

The binary coded control procedures provide for the inclusion of non-standard facilities in addition to the standard facilities given in the appropriate Series-T Recommendations and require a unique code to be allocated to each provider who includes such non-standard facilities. Other ITU-T Recommendations may also use this method to identify the use of non-standard facilities in their procedures.

This Recommendation defines the procedure for the allocation of ITU-T defined code for non-standard facilities.

<p>Attention: This is not an ITU publication made available to the public, but an internal ITU Document intended only for use by the Member States of the ITU and by its Sector Members and their respective staff and collaborators in their ITU related work. It shall not be made available to, and used by, any other persons or entities without the prior written consent of the ITU.</p>

2 Structure of the ITU-T defined code

The ITU-T defined code consists of three parts which are:

country code, terminal provider code and terminal provider oriented code in the case of terminal specific non-standard facilities. The country code identifies the country, the terminal provider code identifies the provider and the terminal provider oriented code is defined by each provider.

3 Procedure for the allocation of ITU-T defined codes

3.1 Country code

The Director of the ITU-T TSB has the responsibility for the allocation and management of the country codes.

The country or area codes should be as given in Annexes A and B to this Recommendation.

The code 11111111 in Annex A is an escape code used to indicate that the next octet contains a code given in Annex B. Whenever the code 1111 1111 is used in the first octet, the country or area code will be found in Annex B.

Note: The list of country or area codes in Annex A reflects the status as it existed in the version of 1990. Codes once issued may have been imbedded in terminal equipment and therefore should not be changed or reassigned even if the country or area is no longer a valid destination.

The Member countries of the International Telecommunication Union not mentioned in this list who wish to obtain a country or area code should ask the Director of the ITU-T TSB for the assignment of an available country code. In their request, they may indicate a specific code if it is available.

3.2 Provider code

An Administration, or a national body designated by an Administration, has the responsibility for the allocation and management of the terminal provider code. When an Administration designates a national body, its address and name should be sent to the Director of the ITU-T. The procedure for the allocation of the terminal provider code should be defined by each Administration or designated national body.

Note: Terminal provider codes may consist of one or more octets.

3.3 Terminal provider oriented code

Providers that have been allocated a provider code by an Administration, or a national body designated by an Administration, have the responsibility for the allocation and management of each terminal provider oriented code.

4 Disclosure of ITU-T defined codes

Assignments by the Director of the ITU-T TSB of country codes will be published in the Operational Bulletin of the International Telecommunication Union.

On request, an Administration or a designated national body may disclose the terminal provider code allocated nationally.

Note - Non-standard facilities are not defined in ITU-T Recommendations but are laid down by Administrations and/or individual manufacturers.

ANNEX A

(to Recommendation T.35)

**List of country or area codes for
non-standard facilities in telematic services**
